

REMARKS

This Amendment is being filed in response to the Office Action mailed on April 10, 2008 which has been reviewed and carefully considered. Reconsideration and allowance of the present application in view of the amendments made above and the remarks to follow are respectfully requested.

In the Office Action, claims 1, 11 and 17-22 are rejected under 35 U.S.C. §102(e) as allegedly unpatentable over U.S. Patent Application Publication No. 2003/0099045 (Doi). Claims 1-7 and 11-16 are rejected under 35 U.S.C. §102(b) as allegedly anticipated by U.S. Patent No. 5,550,657 (Tanaka). Further, claims 8-9 are rejected under 35 U.S.C. §103(a) as allegedly unpatentable over Tanaka in view of Hattori and U.S. Patent No. 6,568,820 (Ohkawa). It is respectfully resubmitted that claims 1-9 and 11-22 are patentable over Doi, Tanaka and Ohkawa for at least the following reasons.

Doi is directed to a panoramic imaging lens 30 shown in FIG 3. As shown in FIG 4, the Doi panoramic imaging lens has a non-reflective part 32 on a roughened surface around a light outgoing

surface 25. Assuming, arguendo, that the Doi non-reflective part 32 is equivalent to the non-random light-scattering structure recited in independent claims 1 and 11, the Doi non-reflective part 32 is in a single plane which is perpendicular to the optical axis. There is no other plane or surface which is parallel to this single perpendicular plane, which is perpendicular to the optical axis, and has the non-reflective part 32. That is, the non-reflective part 32 is only on a single plane which is perpendicular to the optical axis.

Tanaka is directed to a back-lit reflective liquid crystal display (LCD) device that includes cold cathode tubes 21a, 21b surrounded by respective reflectors 24a, 24b, as shown in FIG 3. As clearly shown in FIG 3, a prismatic lens film 26 is located on only a single surface which is perpendicular to the optical axis.

In stark contrast, the present invention as recited in independent claim 1, and similarly recited in independent claim 11, amongst other patentable elements recites (illustrative emphasis provided):

a central lens element having an optical axis and located centrally of a circumjacent mounting portion having spaced parallel surfaces that extend

perpendicularly to said optical axis,
a non-random light-scattering structure comprises
indentations for coupling out light entering said
mounting portion, said non-random light-scattering
structure being located on said spaced parallel
surfaces.

A light light-scattering structure with indentations located
spaced parallel surfaces that extend perpendicularly to the optical
axis is nowhere taught or suggested in Doi, Tanaka, and combination
thereof. Rather, the Doi non-reflective part 36 is on a single
plane which is perpendicular to the optical axis. Similarly, the
Tanaka prism 26 is also located on only a single surface which is
perpendicular to the optical axis. Ohkawa is cited in rejecting
dependent claims to allegedly show other features, and does not
remedy the deficiencies of Doi and Tanaka.

Accordingly, it is respectfully requested that independent
claims 1 and 11 be allowed. In addition, it is respectfully
submitted that claims 2-9 and 12-22 should also be allowed based at
least on their dependence from independent claims 1 and 11.

In addition, Applicants deny any statement, position or
averment of the Examiner that is not specifically addressed by the
foregoing argument and response. Any rejections and/or points of

argument not addressed would appear to be moot in view of the presented remarks. However, the Applicants reserve the right to submit further arguments in support of the above stated position, should that become necessary. No arguments are waived and none of the Examiner's statements are conceded.

In view of the above, it is respectfully submitted that the present application is in condition for allowance, and a Notice of Allowance is earnestly solicited.

Respectfully submitted,

By 
Dicran Halajian, Reg. 39,703
